

The benefits of sERPpa integrated ERP system

CONTINUOUS AND UP-TO-DATE COMPLIANCE WITH THE LAWS

To cover specific areas as well, when necessary.

HUNGARIAN DEVELOPMENT, WITH OUR OWN DEVELOPMENT TEAM

We work with our own agile development team, and the program is constantly evolving backed by a reliable technological background and offers the possibility to make developments to meet special needs.

RELIABLE DATABASE MANAGEMENT

The program uses an MS SQL database management software, which provides a high level of data security and eliminates the possibility of data loss.

CUSTOM DEVELOPMENT OPTIONS

We undertake custom development work for our clients, whether it be for new functions, the creation of lists or special modules.

MANAGE MULTIPLE COMPANIES IN A SINGLE SYSTEM

sERPpa offers the possibility to manage the data of unlimited companies in a single system, without affecting license or product support fees. Thanks to the separated data sets, the administration and bookkeeping of any number of companies can be run in parallel.

HIGH LEVEL UNDERSTANDING OF THE ADMINISTRATIVE PROCESS

In addition to the usual financial, accounting, tax, inventory management and logistics processes, the program also pro-

vides a wide range of solutions – increasing efficiency – for managing the company's processes in other areas as well (production management, repair services, CRM, mobile functions, ...).

FLEXIBLE CUSTOMISATION

The administration management logic used by the sERPpa system is easily adaptable to the way the company operates, and the management interface to the user's needs and the authorisation levels.

FAVOURABLE PRICING

Thanks to the modularity of sERPpa, and the selectable user types, you only need to buy the modules your company needs, so you don't have to pay for parts of the program you don't need. In addition to buying it, you can also rent the program, which offers excellent value for money.

EFFICIENT LAUNCH AND SUPPORT

Our project methodology, developed with due diligence and based on 30 years of experience in implementing business management systems, ensures a successful implementation. Our clients are supported by highly experienced personal advisors and a dedicated customer service team, even after launch.

PERSONAL CONTACT, SKILLED STAFF

Thanks to the extremely low fluctuation of staff at our company, our colleagues have an in-depth knowledge of our clients and the processes our clients are managing. We place great emphasis on the continuous training of our staff.

PROGEN Mérnöki Fejlesztő és Szolgáltató Kft. was established in 1992 and implemented its proprietary Nagy Machinátor and sERPpa integrated ERP systems with more than 2,000 customers so far. The founders of the 100% Hungarian-owned company – who are still with the Company as senior professionals – are proud of the company's ability to compete with the international software development companies.

A PROGEN Kft. pays close attention to customer feedback in the development of its systems and services, and places great emphasis on continuous improvement, both in terms of the technologies applied and the training of its professionals. The Company's in-house development team and its reliable technological background enable it to make administrative work more efficient and enjoyable, independent of the international service providers, based on the needs and feedback of the domestic SME sector.

THE SERVICES OF PROGEN KFT.:

Launch and ERP expert advice: business process assessment, training, program development, data links

Product support: legal compliance, version tracking, Phone Helpdesk, newsletters

IT Operations: system operation, system monitoring, system design and installation, program hosting

sERPpa

Integrated ERP system

Optimised for medium-sized company processes, sERPpa offers solutions for specific industry needs, in addition to the general ERP functionality. Since its launch in 2003, nearly 400 companies have chosen sERPpa to manage their business processes. Thanks to its modular design, it can flexibly be adjusted to meet the real needs of the business, and able to grow along with the company in terms of both the number of users and functionality.

Functionality and industry solutions of sERP

sERP has proven in many industries, in the commercial sector, in the service business and in the manufacturing sector. It is suitable for invoicing, inventory management and accounting. The data entered to the system (functional inputs) can be used to create different levels of summaries, lists and data searches. The data enables the company to carry out operational tasks and make decisions, and on the other hand, provides information about the direction in which the company is heading, i.e. they also support management decision-making.

GENERAL FUNCTIONS

The general functions provide access to users to modules that make day-to-day work easier, more transparent, and more efficient.

The Framework System

The "Framework System" provides cross-functional tasks, across all functions. Protects the data of your company by using an authorisation system, ensuring that data can only be viewed in accordance with the scope of authority. It comes with many options to make the program more convenient to use.

The sERP Web online platform supports strategic and operational decision-making in several areas, with flexible dashboard data displayed via flexible data search.

Document management

The Document Management module allows you to archive and file incoming and outgoing documents. You can use the "drag&drop" function to file electronic documents as documents, but the program also supports the use of page readers. Documents can be grouped and categorised in the system, and various tasks can be defined for each document, with automatic notifications.

Event management (CRM)

This module provides the possibility to manage processes outside the business administration activities of the company (e.g., tracking business opportunities, debt management, etc.).

External processes can be recorded in the files by customer, and internal processes can be recorded by employees. The events forming part of the processes can be freely defined by the user according to the needs of the company. The events can be sequenced according to pre-defined rules; the system is able to change the process status, so the status of the file is automatically set according to the previously defined rules. The current owner or employee in charge of the file is defined, who has a task to do with it, so it is possible to track which employee must do something to make progress with the file.

Contract management

This module is used to register contracts with the customers and suppliers. It also allows you to print ready-to-sign contracts and certificates of completion, using a Word template. It allows you to manage framework contracts by adding contracts to a framework contract and warning if the limit set for the framework contract is exceeded. It enables the generation of customer invoices based on the contracts and contract items entered, either once or regularly (periodically: monthly, quarterly, semi-annually, annually), even for items prepared under an invoicing plan. Contracts can also provide data for general ledger planning.

FINANCE, ACCOUNTING AND CONTROLLING FUNCTIONS

In addition to the basic financial and accounting tasks, sERP offers additional possibilities for controlling and planning. An unlimited number of documents of an unlimited number of companies can be managed in the system. Customer and supplier invoices can be imported from several sources, and customer invoices can be issued as e-invoices. For groups of companies, it is possible to prepare a consolidated balance sheet and profit and loss statement. The program can be used to prepare VAT returns and the supporting analytics, in compliance with the Hungarian legislation. The tax return can be exported to the ÁNYK program used by the Tax Authority.

MODULES:

- Account receivables analytics
- Account payables analytics
- Bank analytics
- Petty cash analytics
- Tax
- General ledger
- Controlling
- General ledger planning
- Liquidity planning
- Accounting in several currencies
- Cost centre accounting
- Tangible assets

HR FUNCTIONS

sERP has integrated HR functions, which allow the recording of the employees' salary-related data and payroll accounting. The personal data of employees, their legal status, their dependents, education related data, trade union membership, language skills, the cafeteria scheme, information related to cost accounting and the necessary withholdings can be recorded. The attendance sheet and remuneration data can be used for payroll accounting, and the payroll slip can be printed or sent to the employees by e-mail, by batch mailing. The sERP payroll module has additional functions to perform social security disburser functions as well. The tax returns can be transferred to the ÁNYK program, and the data required for the data reports to be sent to the KSH can be retrieved.

LOGISTICS, COMMERCIAL FUNCTIONS

The effective management of logistics processes – from procurement to delivery – requires a complete and flexible system that provides up-to-date and accurate information, considering and adapting to the characteristics of the business.

sERP's logistics modules can be flexibly customised to create an inventory management and material accounting system suitable to meet all needs. The system can manage the warehouse structure, which can be broken down according to various aspects, manageable even via mobile devices. Offers high flexibility in pricing. Thanks to the integration level, the database-level linked document items imported from the sub-systems ensure an up-to-date tracking of the processes from order entry to invoicing, and accounting. The e-commerce functionality is made complete with an in-built B2B interface, courier service links and integration with the most popular webshop solutions.

MODULES:

- Inventory
- Order register
- Retail trade, invoicing
- Logistics planning (MRP)
- Mobile features
- Webshop contact
- B2B partner centre
- Courier service contact
- EKÁER system

INDUSTRY FEATURES

In addition to the basic ERP functionality, sERP also includes modules to meet specific industry needs and processes. These modules have been developed considering our customers' guidelines and the industry standards. As a result of sERP's modular design, our clients can choose from a range of industry solutions that is useful to them and are integrated into the program.

MODULES:

- Production management
- Excise tax records, e-TKO management
- Repair service
- Communal services management
- Connection with warehouse management systems (iLogistic, WBS, MFC, Nagel)
